

# Integrating output from the outset keeps ERP upgrade costs down

*"It's been a flexible way to work, and we've been able to keep development hours to a minimum."*

Felix Söderberg  
IT/IS Application Manager, Scanreco AB

## About the company

Scanreco has developed and supplied reliable radio remote control systems to crane and machinery manufacturers worldwide since the 1980s.

They have a global presence and a growing network of distributors and branch offices, and they use the AX 2012 R3 ERP system.

## Results

- Reduced implementation costs by minimising time spent
- Fast support from Tabellae
- Help for self-help
- Professional layout
- Document changes can be made quickly

all about documents

**Scanreco integrated Tabellae in their ERP upgrade from the outset, achieving significant savings in both time and money.**

### Flexible and economical implementation

"The earlier you think about output management, the more you save. I definitely recommend implementing it from the outset," says an enthusiastic Felix Söderberg, IT/IS Application Manager. "It's been a flexible way to work. We've been able to keep Tabellae's development hours to a minimum, while benefiting from their enormous expertise."

### Professional output was a necessity

"While upgrading from Concord to AX 2012 R3, we realised that the quality of the standard documents in AX was actually quite embarrassing. We needed more refined designs for our invoices, order confirmations, purchase orders and so on, but it became clear that it would be very costly to have an AX consultant adapt them. So we needed a professional output management system from the outset."

### No limitations

No sooner said than done. Scanreco settled on Tabellae and the implementation went smoothly. When the new ERP system went live, the output management element worked perfectly.

Tabellae trained Scanreco to do the work themselves, and after implementation Ta-

bellae provided ongoing support, while keeping the total time spent to a bare minimum.

"We received timely replies to our questions. They've been kind and helpful and solved our problems constructively," says Felix Söderberg.

### Makes all the difference

"We wouldn't have been able to handle our output as flexibly without Lasernet. And the best thing is that there are no limitations. It's very easy to generate our own reports, extractions and layouts – and it's easy to make both minor and major adjustments work. Today, it only takes a few hours to generate a new report from scratch. Without Lasetnet, it would probably take several days."

Implementation has also been less costly, because Scanreco could do most of the work themselves. About every three weeks, they need to make small adjustments to one or more documents. This used to require countless questions from employees, costing valuable time and development hours. "Today, I can do it all myself and be done in 15 minutes. We don't need expensive consultants, and I actually think it's fun to work with. We save time and money because the system is so easy to use and the path from thought to action is so short. Without Lasetnet and Tabellae, we wouldn't be where we are today," concludes Felix Söderberg.
